Compatible Lenses

Canon RF15-35, 16-35 + Adaptor, 8-15 + Adaptor, 17-40 + Adaptor, 100mm

Nikkor 14-30Z

Other on Request

General features:

- Lightness and Travel Friendly, the new LeoR is made from a block full of anticorodal aluminum. Its weight is about 500grams less than the Leo3, but maintaining the same dimensions.
- Robustness, although it has been lightened, even in this case the operation is guaranteed up to -150m, with the life warranty * EasyDive.
- Technology, LeoR is the result of over 20 years of experience in electronic control in underwater cases. In addition to the technologies implemented over the years on Leo Housings (USB / IR / Wi-Fi), the control via Bluetooth has been added to the Bluetooth and an integrated OLED display in housing that allows easy access to the menus and replica of the parameters of the cameras. The display is equipped with a "lighting sensor" that automatically adjusts the brightness of the OLED display and indicator LEDs and disables the backlight of the push-button panel in a situation of strong brightness.
- Autonomy, the new LeoR can be equipped with two Li-Ion 14.8V 3000mAh battery packs. The new internal power supply board has been designed to supply power both to the camera and to all the accessories that can be installed. Only one battery for triggers, Vacuum System, illuminated panel and HDMI-SDI3G converter. If your camera does not have a USB charging option, you can still power it using a "fake" compatible battery.
- Optional illuminated push-button panel, to meet once again to the needs of our customers, the main push-button panel lights up at the touch of the buttons, resulting visible even at night or in low visibility conditions. The pond lighting system with wireless power supply, allows you to easily remove the plate that stops the keys for normal maintenance. The duration of the backlight can be set through the dedicated application.
- Director, thanks to the HDMI-SDI3G converter (optional), you can have a double SDI video output, one for the external monitor (optional) and the other to be used to send a video signal to the surface.
- Custom Control, thanks to electronic control, unlike mechanical housings, you can quickly manage commands that normally require a more complex combination of mechanical buttons or access to the camera menu via touch screen can Being executed by pressing a simple button. In our software for BlackMagic, it was expected, for example, a single button to change both the video resolution and fps.
- Wet contact magnetic buttons, the LeoR handle, allows you to have all the handy controls, 2 trigger fronts and 9 on the back. The switch button also allows you to increase the commands

available.

- Ergonomic handle, the ergonomics of the new LeoR is incredible, the handle allows quick access to all the main functions, without ever remove your hands from the housing.
- Predispositions, LeoR has so many predispositions, in the lower part has 8 M5 holes (4 for removable support feet), 1 hole 1/4" and 1 hole 3/8" centrally positioned for a possible tripod. There are also 2 M8 holes, in order to fix the bracket for the second handle. In the back of the display there are 6 other M4 holes in which it is possible to fix a hood or other accessories. Finally, at the top there are 5 M14X1 caps where it is possible to implement 2 SDI video output connectors, Vacuum System, and other possible solutions.
- Connected, the new LeoR app, allows you to connect to the housing and best manage all available functions:
 1. Insert the pairing pin for the Blackmagic directly from the phone display
 2. Customize the buttons feature function
 3. Update the housing software and add new cameras
 4. Adjust the housing parameters (backlight ignition time, on-off trigger, on-off converter, camera auxiliary power supply, etc.

Universal Professional Underwater Housings and Light Systems by Easydive 100% Made in Italy. The most advanced technology applied to diving. Certified down to -150m

Pack Content

Revolution 21000 Power
x 2
